

SMS PROJECTOR SHORT THROW WALL MOTORIZED

Interactive attraction.

A light and attractive version of our wall bracket with push-button height adjustment. The motor is now elegantly concealed behind the board, and a newly designed wall fitting replaces the floor fitting, freeing floor space and providing easy access to the bracket for all users. The stand can be adjusted both vertically and horizontally upon installation. One useful new

feature is that it is easy to get the best possible image by fine-tuning the height of the projector pillar. Installation time has been significantly reduced by the use of premounted components. A single transport box. Universal board holder. Horizontal and vertical adjustments are possible at installation. Simplified cable feed through.

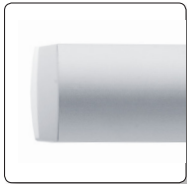

INFO

- Finish: white/silver.
- Maximum board weight: 50 kg*
- Maximum projector weight: 8 kg*
- Maximum board height: 1500 mm
- Minimum board height: 1170 mm
- Maximum board depth: 90 mm
- Tilt of projector slide: $\pm 15^\circ$
- Adjustments: the main pillar can be electrically adjusted in the vertical direction. With SMS Projector Pillar, the projector can be suspended at a freely chosen position anywhere on the pillar. On the SMS Projector pillar, there is an adjustment plate which allows the bar to be adjusted upward or downward by 12.5 mm, enabling a precise focusing of the image on the board.
- Guarantee: 2 years.

Other information: One universal fitting that can be used with most currently available interactive boards – the same fitting is ordered for all brands of board.

To find out if your interactive board fits the Short Throw Wall motorized (together with SMS Short Throw Unislide and SMS Projector Pillar), please see our compatibility guide.

***Note!** Max weight is the load capacity of the motor and mount. Performance and experience is bound to the wall construction and the design of the interactive board. For this SMS does not take responsibility.

White plastic fittings. SMS Projector Short Throw Unislide in white.

The adjustment plate allows the bar to be adjusted upward or downward by 12.5 mm.
